

# FinOps toolkit

# Workload optimization

The **Workload optimization report** provides insights into resource utilization and efficiency opportunities based on historical usage patterns. Use this report to determine if resources can be scaled down or even shutdown during off-peak hours to minimize wasteful usage and spending. Also consider cheaper alternatives when available and ensure all workloads have some direct or indirect link to business value to avoid unnecessary usage and costs that don't contribute to the mission.

This report helps implement the [Workload optimization capability](#) in the FinOps Framework.
