

Cost Management connector report

v24.07.08

The **Cost Management connector report** includes several summaries and breakdowns of your effective (amortized) and billed costs based on the FinOps Open Cost and Usage Specification (FOCUS), including insights into commitment discounts and Azure Hybrid Benefit. This report uses amortization, which commitment purchases down and allocates costs to the resources that received the benefit. Effective costs will not match your invoice.

This report shows "discount savings" which includes how much you saved compared to list prices after negotiated and commitment discounts. "Commitment savings" includes how much you saved compared to on-demand prices for commitment discounts only.

[Learn more](#)

How to connect to your data

This report connects to your data using the Microsoft Cost Management connector for Power BI. If you experience performance issues or need additional capabilities, consider switching to FinOps hubs. [Learn more](#)

To connect your data, select Home > Transform data (table with a pencil icon) and follow the instructions under Setup.

⚠ Please note Power BI Pro can only load ~\$2M in raw cost details per refresh. Premium can load ~\$5M.

About the FinOps toolkit

This report is a part of the FinOps toolkit, an open-source collection of customizable FinOps solutions that automate and extend native Microsoft Cloud capabilities. [Learn more](#)
